CLINICAL SYNOPSIS

The assessment suggests Hair on pillow / floor / shower with 6–12 months. The current plan focuses on genetic predisposition and metabolic dysfunction, scalp stability and nutritional support while monitoring response over the next review window.

MAIN ACTIVE CONTRIBUTORS

- Genetic predisposition**
- Metabolic dysfunction**
- Chronic stress**
- Oxidative stress**

GOAL
Reduce hair fall and improve quality & growth
DrFACT Mumbai

CLINICAL SNAPSHOT

DURATION 6–12 months	SHEDDING ~50–100 strands (Noticeable)	PATTERN Hair on pillow / floor / shower	SCALP Dandruff + Itching + White flakes,
HORMONAL/BLOOD-LOSS Heavy bleeding periods, Pre diabet	METABOLIC	DIET Vegetarian	GOAL Reduce hair fall and improve quali

DRIVER TO KIT MAPPING

Driver to exact selected kit to linked conditions to therapeutic focus

DRIVER	SELECTED KIT	LINKED CONDITIONS	HOW THIS KIT HELPS
Blood-loss or iron support Selected kit supports iron balance and follicle recovery where blood-loss or iron demand is relevant.	Iron Up Gold (Iron Homeostasis & Hair Recovery)		Iron store restoration → replenishes depleted reserves required. Follicular metabolic support → supports iron-dependent processes. Oxygen transport & cellular energy → enhances haemoglobin and. Iron utilisation optimisation → supports absorption, transport.
Chronic stress HPA-axis activation accelerates anagen-to-telogen transition.	Inflammation Control		Cytokine suppression → reduces follicular stress signals. Immune modulation → restores balanced immune response. Androgen sensitivity control → limits inflammation-driven DHT. Oxidative protection → prevents cellular damage.
Metabolic dysfunction Disrupted insulin / AMPK signalling reduces follicular energy supply.	Pro Fact Meta B — Cyclical Metabolic Reset		Weight & adipose-tissue management → reduces BMI, suppresses. Hair & skin protection → DHT modulation, follicular VDR. Mood & cortisol regulation → adaptogenic and circadian support. Hormone rebalancing → insulin sensitisation and endocrine.
Chronic stress HPA-axis activation accelerates anagen-to-telogen transition.	Pro-Immune Restoration		Immune modulation → strengthens innate and adaptive immunity. Inflammation control → reduces cytokine-driven follicular damage. Oxidative stress reduction → protects follicles and skin cells. Stress & sleep regulation → normalises cortisol and recovery.
Metabolic dysfunction Disrupted insulin / AMPK signalling reduces follicular energy supply.	Female Pattern Hair Loss (FPHL) — Pattern Hair Loss		Androgen regulation → reduces DHT impact on follicles. Follicle rejuvenation → supports stronger, thicker hair growth. Inflammation control → protects follicles from damage. Metabolic correction → restores healthy hair-cycle signalling.

TOPICAL AND SCALP-CARE PLAN

F-Emugrow MCRD
Follicle support in responsive areas
Apply to the affected scalp area as directed; massage gently.

F-Biwash+ Anti-Dandruff Shampoo
Scalp barrier and dandruff control
Use on wash days as advised; rinse after the recommended contact time.

F-Trichosilk D&F (With Treatment)
Hair-shaft and scalp-care support
Apply a small amount to hair lengths as advised; do not rinse.

Minoxidil 2% should be reconsidered only after the scalp barrier and dandruff are controlled.

RECOVERY JOURNEY

Day 0-30
Stabilise scalp and active triggers
Reduction in active hair fall Improvement in scalp health and comfort Better hair.

Day 30-60
Reduce shedding and rebuild support
Early signs of follicular recovery Improvement in hair caliber (thickness) Appearance.

Day 60-120
Early follicular recovery
Visible improvement in hair volume and density Reduced scalp show-through in.

Beyond Day 120
Visible improvement and consolidation
Further improvement in density and coverage Consolidation of improvement observed.

LIFESTYLE AND DAILY SUPPORT

What supports recovery

- ✓ Metabolic dysfunction
- ✓ Chronic stress
- ✓ Iron-rich vegetarian nutrition
- ✓ Adequate protein
- ✓ Hydration
- ✓ Sleep consistency
- ✓ Regular walking

What may slow recovery

- ✗ Smoking or vaping
- ✗ Uncontrolled dandruff
- ✗ Untreated heavy bleeding
- ✗ Extreme diets
- ✗ Harsh chemical treatment
- ✗ Excessive heat styling
- ✗ Inconsistent treatment use
